

Admin Dashboard

Functionality Overview & Implementation Guide

EZBiz Formation Platform

Prepared: March 31, 2026

Executive Summary

The Admin Dashboard is a comprehensive back-office management system built for business formation service operations. It provides seven integrated modules covering the full order lifecycle, customer engagement tracking, team collaboration, billing, and data analytics.

Module Overview

Module	Purpose	Features
Orders	Central hub for managing all business formation orders from intake to completion.	13 features
Consultations	Track and manage incoming consultation requests from potential clients.	6 features
Applications	Monitor business applications submitted through the self-service portal.	4 features
White Glove Billing	Bill customers for premium White Glove service overage hours via Stripe invoicing.	5 features
Feedback	Analyze user satisfaction and gather product improvement insights.	7 features
Analytics	Track website engagement, CTA performance, and user behavior patterns.	7 features
Users	Manage platform roles and access control for team members and customers.	5 features

Orders Module

Central hub for managing all business formation orders from intake to completion.

Feature Breakdown

Feature	Description	Priority
Order List Table	Displays all orders with company name, contact, entity type, state, package, amount, status, and date	High
Status Management	Inline status dropdown with 10 statuses: Draft, In Progress, Pending Payment, Payment Complete, Ready for Submission, Submitted, Processing, Filed, Completed, Rejected	High
Search & Filter	Full-text search across order ID, email, company name, and contact name; filter by status	High
Order Detail Dialog	Deep-dive view aggregating data from 12 related tables (business info, contacts, addresses, participants, registered agent, company management, IRS party, agreements, payments, documents, events, admin notes)	High
Inline Editing	Edit any order section (summary, business info, contact, registered agent, IRS party, company management) directly in the detail dialog	High
Address Management	View, add, and edit mailing/principal addresses per order	Medium
Participant Management	Add, edit, and remove members/managers with ownership percentages, titles, and signer flags	Medium
Document Upload	Upload PDF/DOC/image files to cloud storage, auto-linked to orders with signed URLs	High
Admin Notes	Private internal notes system for team communication on each order	Medium
Audit Trail / Timeline	Complete event history showing status changes, document uploads, and admin amendments with timestamps	High
CSV Export (Single)	Export individual order data as CSV for third-party submission	Medium
CSV Export (All)	Bulk export all orders as CSV for reporting	Medium
Stats Dashboard	Summary cards: Total Orders, Pending Payment, Payment Complete, Submitted counts	Medium

Consultations Module

Track and manage incoming consultation requests from potential clients.

Feature Breakdown

Feature	Description	Priority
Request List Table	Displays consultation requests with name, email, phone, business type, consultation type, status, and date	High
Status Management	Update status: Pending, Contacted, Scheduled, In Review, Completed, Rejected	High
Search & Filter	Search by name/email/phone; filter by status and business type	Medium
Stats Cards	Total Requests, Pending, Contacted, and Completed counts	Medium
CSV Export	Export filtered consultation data for CRM import or reporting	Low
Quick Actions	One-click email and phone links for each consultation contact	Medium

Applications Module

Monitor business applications submitted through the self-service portal.

Feature Breakdown

Feature	Description	Priority
Application List	View all business applications with name, type, state, status, and user ID	High
Status Updates	Change application status: Pending, In Review, Approved, Rejected, Completed	High
Multi-Filter Search	Search by business name/user ID; filter by status, business type, and state	Medium
CSV Export	Export filtered application data for external processing	Low

White Glove Billing Module

Bill customers for premium White Glove service overage hours via Stripe invoicing.

Feature Breakdown

Feature	Description	Priority
Overage Calculator	Automatically subtracts 2 included hours; calculates billable hours at \$80/hr	High
Invoice Generation	Sends Stripe invoice to customer email with optional order ID linkage	High
Billing History	Table of all White Glove invoices with customer, hours, amount, status (Paid/Open/Void), date, and invoice link	High
Result Feedback	Success/error feedback with direct link to Stripe invoice after billing	Medium
Refresh Control	Manual refresh of invoice history from Stripe	Low

Feedback Module

Analyze user satisfaction and gather product improvement insights.

Feature Breakdown

Feature	Description	Priority
Feedback Summary	Cards showing Total Feedback count, Average Rating, With Comments count, and 5-Star Rate percentage	High
Rating Distribution Chart	Bar chart showing distribution across 1-5 star ratings	Medium
Category Breakdown	Pie chart segmenting feedback by category: General, Ease of Use, Pricing, Services, Design, Feature Request, Exit Intent	Medium
Recent Feedback Table	Latest 30 submissions with star ratings, category badges, comments,	High

	page visited, and date	
Date Range Selector	Filter by Last 24h, 7 days, 30 days, or 90 days	Medium
Category Filter	Filter by specific feedback category	Medium
CSV Export	Export filtered feedback data for analysis	Low

Analytics Module

Track website engagement, CTA performance, and user behavior patterns.

Feature Breakdown

Feature	Description	Priority
Summary Metrics	Cards: CTA Clicks (with unique sessions), Page Views, Average Scroll Depth (%), Average Time on Page (seconds)	High
Daily Activity Trend	Line chart showing CTA clicks and page views over time	High
Top CTA Buttons	Horizontal bar chart ranking the 10 most-clicked call-to-action buttons	High
Clicks by Page	Donut/pie chart showing CTA click distribution across pages	Medium
Scroll Depth & Engagement	Grouped bar chart showing average scroll depth and time on page per page	Medium
Recent Clicks Log	Table of latest 20 click events with button label, type, page, destination, and timestamp	Medium
Date Range Selector	Filter analytics by Last 24h, 7 days, 30 days, or 90 days	Medium

Users Module

Manage platform roles and access control for team members and customers.

Feature Breakdown

Feature	Description	Priority
User Roles Table	List all users with name, email, role badge (Admin/User), join date	High
Role Promotion/Demotion	One-click toggle between Admin and User roles	High
Add Role by Email	Look up existing users by email and assign roles	Medium
Search & Filter	Search by name, email, or user ID; filter by role type	Medium
Stats Cards	Total Users, Admins, and Regular Users counts	Medium

Order Lifecycle Pipeline

Orders follow a 7-stage status pipeline enforced by the Order Status Engine. Each transition triggers dual audit logging and automated email notifications.

Stage	Description
1. Draft	Order created, customer filling out information
2. Processing	Admin reviewing submitted order details
3. Payment Complete	Stripe payment confirmed via webhook
4. Submitted	Order submitted to state filing partner (CorpNet)
5. State Processing	State is processing the filing
6. Filed	State has approved and filed the entity
7. Completed	All documents delivered, order finalized

Audit & Security

The system maintains a comprehensive audit trail through the `order_events` table:

- Dual-event logging: lifecycle event (e.g. 'filed') + normalized 'status_changed' event
- Admin amendments tracked with section name and fields updated
- Document uploads logged with file metadata
- Role-based access control via `user_roles` table with RLS policies
- Admin verification via `has_role()` security definer function
- All admin actions attributed with actor identification

Data Architecture

The admin dashboard aggregates data from 13+ normalized database tables:

Table	Purpose	Relationship
<code>orders</code>	Core order record	Primary entity
<code>business_information</code>	Company name, purpose, organizer type	1:1 with orders
<code>contact_information</code>	Customer name, email, phone	1:1 with orders
<code>addresses</code>	Mailing and principal addresses	1:N with orders
<code>participants</code>	Members, managers, officers with ownership %	1:N with orders
<code>registered_agent</code>	Agent name, type, and address	1:1 with orders
<code>company_management</code>	LLC management type	1:1 with orders
<code>irs_responsible_party</code>	EIN applicant with encrypted SSN	1:1 with orders
<code>agreements</code>	Terms & privacy acceptance with IP	1:1 with orders
<code>payments</code>	Stripe payment records	1:N with orders
<code>documents</code>	Uploaded filing documents	1:N with orders
<code>order_events</code>	Audit trail and timeline	1:N with orders
<code>admin_notes</code>	Internal team notes	1:N with orders

External Integrations

Integration	Purpose	Used In
-------------	---------	---------

Stripe	Payment processing, invoice generation, webhook handling	Orders, White Glove Billing
CorpNet API	State filing submission and status tracking	Orders
Cloud Storage	Secure document storage with signed URLs	Orders (Document Upload)
Email Service	Automated status notification emails	Order Status Engine
